

>> **Fluoroplastic Tubes**

Fluoroplastic Tubes for Your Specific Needs

Are you looking for a reliable supplier of fluoroplastic tubes? A supplier that can meet standard as well as customer-specific needs when it comes to dimensions, lengths, colours, shapes, cut and material. Habia Teknofluor offers a wide range of tubes for different environments and continuously develops new products on customers' requests.

Our fluoroplastic products have superior chemical resistance and works in a wide temperature interval compared to other plastic products. Other distinguishing features is the very low friction combined with excellent isolating and electrical properties.

Since our tubes are made from PTFE or other fluoroplastics they also are easy to clean due to low adhesion ability. Moreover our products are very inert and do not react with other materials. They do not degrade by ultraviolet radiation, do not age and do not, according to UL-V0, burn.

Habia Teknofluor products are well suited in applications where no other solutions will be enough. Our products are used in a wide range of environments including medical equipment, food and drug application, analytical instruments, electrical applications, heat exchangers and transports of harsh chemicals.

Customer First

In all our business, from manufacturing to technical support, Habia Teknofluor guarantee our customer a service and quality satisfying their needs and wants. A guarantee you can trust – We are specialists in fluoroplastics!

Most of our customers represent the automotive, chemical, food & drug, aerospace or defence industries, thus putting very high demands on the quality of our products. Often they turn to us when no other solution is good enough. Common areas of use include medical equipment, transportation of harsh chemicals, analytical instruments, electrical applications and heat exchangers. Since our products are being used in demanding surroundings we work with continuous quality controls and have high demands on our raw materials.

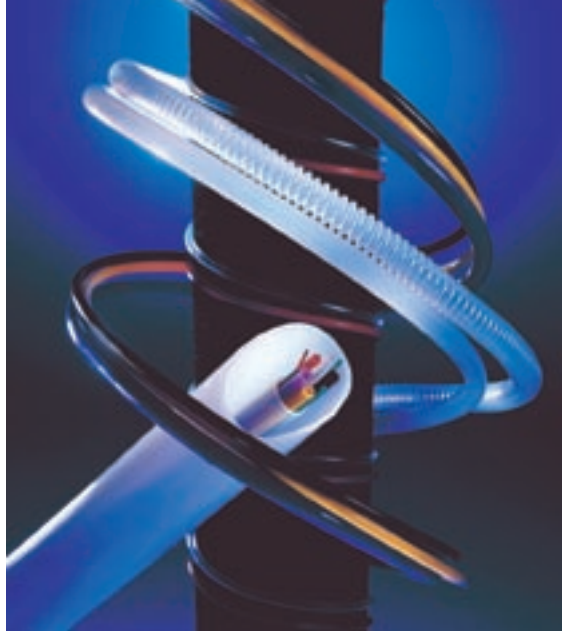

Product Range

Habia Teknofluor delivers a wide range of fluoroplastic tubes, mainly in PTFE, PFA, FEP, ETFE and PVDF. Our range comprises industrial tubes, coloured, antistatic, corrugated, wire and welding liner, spiral cut and heat shrinkable tubing in dimension according to metric, inch and AWG-standards. Our tubes may also be delivered with UL-recognition. Special performance like preformed, pre-cut and colour striped fluoroplastic tubes are delivered on request.

- **Industrial Fluoroplastic Tubing** – We produce high quality industrial fluoroplastic tubing in a wide range of sizes and dimensions with tight tolerances.
- **Coloured and Striped Tubing** – Habia Teknofluor offers a standard range of twelve colours. We also produce tubing in special colours on customer requests.
- **UL-recognised Tubing** – We produce tubing with UL recognition in a variety of dimensions and tolerances.
- **Heat Shrinkable Tubing** – Provides a tight protective covering and extends the life to items that are subject to aggressive chemicals, corrosion, high temperature or other critical conditions. Useful in various areas such as electronic, chemical, optical, medical, and automotive.
- **Corrugated Tubing** – Offers an extremely high flexlife and a near zero bend radius capability. It is ideal for protection and to transport gas, fluids and chemicals.
- **Spiral Cut Tubing** – A highly flexible wrap for harnessing and insulating wires, cable, hoses, and other bundles. Our spiral cut tubing is most expandable and can be used and reused on already assembled cables, in a wide range of dimensions.
- **Antistatic Tubing** – Prevent electrical charges to occur at high flow rates.
- **Preformed Tubing** – Habia Teknofluor is capable of producing preformed tubes in a variety of shapes to fulfil design opportunities.
- **Wire and Welding Liner** – Provides smooth gliding with low friction, long lifetime and chemical resistance.

Our flexibility is your strength!

Habia Teknofluor AB has developed and marketed high quality fluoroplastic products since 1954. After 50 years in the business we are recognised as one of Europe's leading manufacturer of fluoroplastic products. We produce a comprising range of tubes, high performance hoses, lined pipes and machined parts in various fluoroplastics, such as PTFE, PFA, FEP, ETFE and PVDF.

Our products are used in situations demanding the unique properties of fluoroplastics, for example with harsh and aggressive chemicals, high temperatures, strict demands on clean production facilities or other demanding environments. Our products are mainly used in chemical industry, automotive, aerospace, and food and medical industry.
